

Hosting Guidelines for DevOps Downtime Meetup

With DevOps Downtime, we want to create a shared space where IT professionals can connect, share their experiences, discuss challenges, and explore potential solutions.

To ensure a smooth and enjoyable experience for everyone, we have prepared the following guidelines for the hosting organization.

About DevOps Downtime

DevOps Downtime is a meetup event that aims to foster a collaborative environment for IT professionals to exchange knowledge and experiences in the realms of DevOps, SRE, Security, and operations.

It is an inclusive event open to anyone interested, and can be hosted by any interested body, with the intention of establishing a lasting and inspirational platform.

Our goals

As an emerging DevOps community, we want to foster a culture of exploration and innovation. We encourage our members to think outside the box and challenge conventional practices.

By exploring fresh perspectives, we believe that we can push the boundaries of what DevOps can achieve and discover new ways to optimize software development and operational processes.

Why “DevOps Downtime”?

In the search for a name that truly reflects DevOps culture and is easy to remember, we eventually finalized "DevOps Downtime" by combining two "D" words.

The term "Downtime" signifies the DevOps focus on reducing downtime and enhancing system resilience— reflecting a core value of the culture.

Downtime further conveys a sense of relaxation and rejuvenation. We envisioned our event as a space where participants can unwind while expanding their knowledge of DevOps, security, and related domains.

Thus, "DevOps Downtime" not only has a catchy and memorable flair but also captures the spirit of continuous learning and growth that we strive to cultivate in our community.

What to look forward to?

1. A platform for IT professionals and companies in Nepal interested in DevOps to meet and connect.
2. Speaker presentation by experts on the latest trends, best practices, and case studies in DevOps and Security.
3. Learning opportunities about different career paths and job options in DevOps and related fields.
4. Q&A sessions and panel discussions with industry leaders and experienced practitioners.
5. An enjoyable and inclusive environment where you can share experiences, learn from others, and form long-lasting connections.

Hosting the Meetup

The venue hosting the meetup is responsible for deciding the format of the event, finding speakers (internal and/or external), designing creatives, and doing event marketing.

However, there are some rules to keep the branding and marketing consistent.

1. Talks or panel discussions shouldn't be long. The "formal" part of the event should be over in 30 minutes max, to be followed by an informal networking session.
2. Creatives should follow the DevOps community brand guidelines and should NOT have the host company's logo or branding.
3. Don't forget to mention the day of week in every creative (Saturday/Sunday).
4. Proper signage should be put up on the nearby road and on the path to the location on the day of the meetup.
5. No expenses are allowed on lunch, only tea/coffee/light snacks.
6. The MC will be responsible for keeping the event on track and ensuring that everything runs smoothly. They will inform attendees to put their mobile phones on silent mode, and guide them to the location of the emergency exit and toilets.

Meetup Marketing

The host will share posters and promotional content from their own social media channels. [DevOps Downtime Facebook group](#) will be used to distribute event-related content provided by the host. We also have [Discord Server](#).

Expected Audience

The target audience size is 50-75 but please feel free to accommodate more participants as per your capability.

Photos/Videos Recording

The host can decide to record the event or not. The meetup host can put the photos and video reels of the talks and networking session on their own social media channels.

If they want to upload the full video of the speakers' talk, they must get permission first.

RSVP

RSVP is not a requirement for this meetup.

However, you can share forms and collect RSVPs to get an estimation of how many people might show up. We encourage you to put a disclaimer “No RSVP required, just drop in” on all posters.

Charging

The host is not allowed to charge attendees for “tickets” or snacks.

Topics to explore

Not all topics are created equal when it comes to DevOps Downtime. Find some topics below that will help you identify interesting and impactful topics from questionable ones.

Good topics:

- Infrastructure as Code (IaC) with Terraform
- Continuous Integration and Deployment (CI/CD) with Azure DevOps
- Container Orchestration with Docker Swarm
- Migrating to Kubernetes
- Best practices for monitoring and logging in DevOps
- Introduction to GitOps
- Automating Infrastructure with Ansible
- Serverless Computing with AWS Lambda
- Managing Secrets and Credentials in DevOps
- Exploring the benefits of DevSecOps

Questionable topics:

- The history of DevOps
- Comparing DevOps tools (e.g., Jenkins vs CircleCI)
- General introduction to cloud computing (e.g., What is AWS?)
- Introduction to programming languages (e.g., Python, Java)

- The basics of networking (e.g., TCP/IP, DNS)

The talks are supposed to be a teaser of a technology, library, or concepts the speaker is passionate about, not a comprehensive workshop. Ideally, a talk should be in a show-and-tell format, where the speaker talks about their personal experience.

Resources

Logo, sample speaker graphics and other resources are hosted [here](#).
